

PRODUCT SHEET

Supply Chain Suite

Supply Chain Management on top of your ERP

Supply Chain Suite

The Supply Chain Suite (SCS) lets you design, monitor, manage, and understand your entire supply chain.

The holistic, data-driven view of the supply chain lets you design processes more efficiently and cut costs, leaving you ideally positioned to meet the challenges of next-generation industry.

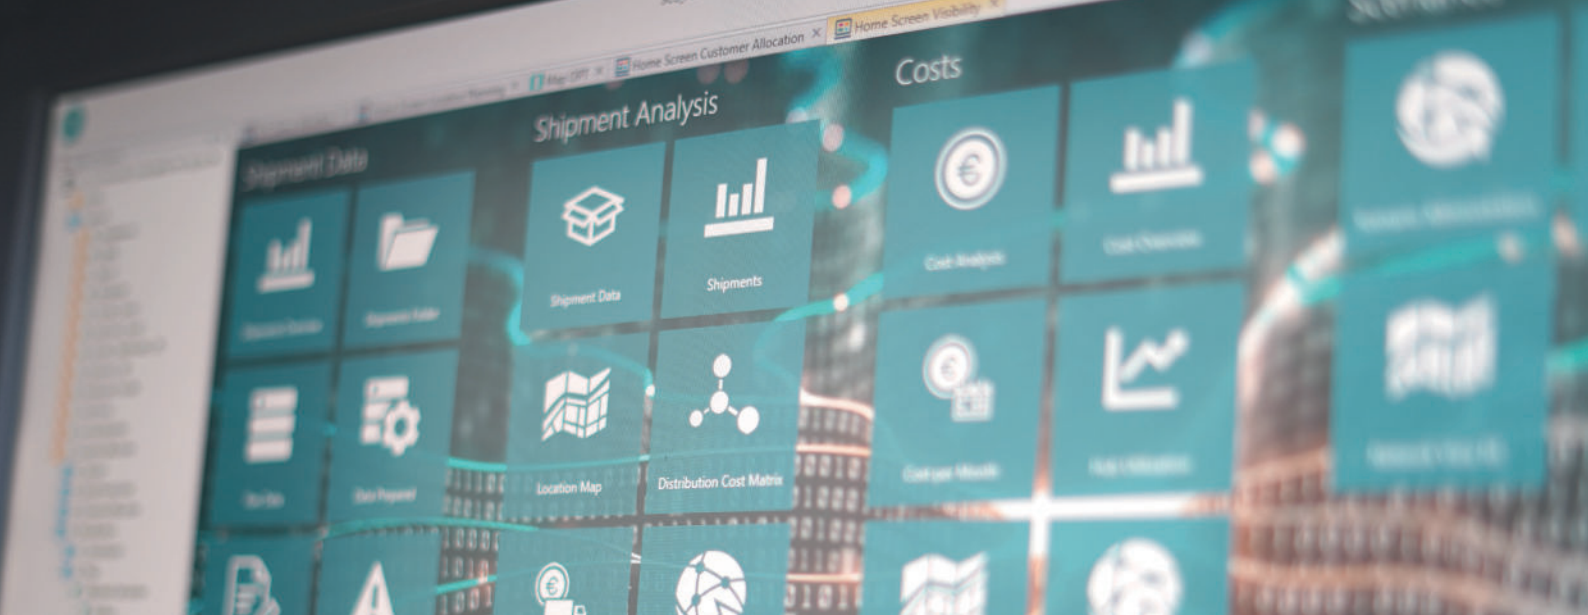

Monitoring

SCS brings extended supply chain visibility to your business. It does so by consolidating data from all sources and formats (ERP data, unstructured data), refining it, then expanding it in a flexible, configurable data model.

Understanding

The standardized data models in SCS offer powerful simulation and analysis tools to run business and logistical evaluations.

SIEMENS

Designing

SCS lets you simulate and optimize the logistical processes in your supply chain. Here you'll find many areas for tapping into your strategic and tactical potential, and you'll be able to identify conflicts before they occur.

Managing

SCS lends a hand with the operational aspects of warehouse and transport processes – in system-supported calls for tenders and contracts, and in the day-to-day work with warehouse strategies and transport planning. SCS also lets you leverage the operational potential of your supply chain.
