

Short portrait:

SimPlan

From simulation to virtual commissioning to the digital twin of your production and logistics processes

SimPlan AG was founded in 1992 as a service provider for the simulation of operational processes. We see ourselves as a cross-industry full-service provider for all aspects of simulation, providing you with extensive knowledge, many years of experience and modern methods in the analysis and optimization of your business processes.

Our services range from process analysis and consulting to material flow and logistics simulation and virtual commissioning.

In addition, we are a neutral distributor for simulation software and support you in the selection as well as in training and implementation in your company.

Of course, we also offer all related associated maintenance services.

Diverse fields of application

The fields of application for simulation can be found in all business areas and all industries and are becoming more and more diverse. Here, simulation serves as an aid in sales and marketing, in the planning, realization and operation of a system.

The customer benefits

- ✓ Creating a solid foundation for decision-making by making processes within of process chains are made transparent
- ✓ Identify bottlenecks and show the impact of process changes
- ✓ Shorten commissioning times and increase process performance
- ✓ Test and compare improvement measures without risk
- ✓ Protect investments

FOUNDING

EMPLOYEES
120

LOCATIONS
12

Examples of projects

- Filling systems
- Coating plants, e.g. painting plants
- Factory and halls planning
- Production plants and plant control
- Hall crane systems and hall traffic
- Car body shop planning
- Picking systems
- Storage and conveyor technology, e.g. high bay warehouse
- Material flow and value stream analysis
- Assembly systems, e.g. WT circulation systems
- Production plans and concepts
- Packaging and loading optimization
- People and traffic simulation

Why SimPlan?

- Detailed knowledge in the field of production and logistics from more than 30 years project work
 - Development and use of standards
 - Permanent further development of simulation methods through research and development
- Objective and independent consulting
- High personnel capacity for fast reaction to your questions
- Close cooperation and project integration with a high degree of on-site involvement
- Development of innovative solutions for the efficient handling of problems
